

Guangyi Yang

171 W Julian St Unit 520, San Jose, CA 95110 | +1 (669) 343-4916 | guangyiyang8@gmail.com

EDUCATION

Northeastern University, Silicon Valley, USA

09/2024-05/2026

Master of Science in Information Systems

Average GPA: 3.88 / 4.00

Core Courses: Program Structure and Algorithms, Application Engineering and Development, Data Science Engineering Methods and Tools, Adv Techniques With LLM, Data Mgt and Database Design, LLM with Knowledge Graph DB, Machine Learning Med Devices

Nanjing Forestry University, Jiangsu, China

09/2019-06/2023

Bachelor of Engineering in Computer Science and Technology

Average Score: 87.32 / 100 | Merit Student & Scholarship, Nanjing Forestry University

Core Courses: Principles of Computer Organization, Data Structures, Operating System, Computer System and Interface, Database Principles and Applications, Computer Network, Algorithm Analysis, Probability and Statistics

SKILLS

PROGRAMMING LANGUAGES
TECHNIQUES & SOFTWARE

C/C++, Java, Python, HTML, CSS, JavaScript, shell, MATLAB
MySQL, Redis, MongoDB, Spring, Spring Boot, Git, Linux, Maven, Postman,
Docker, CloudCompare, PyCharm, Idea-IntelliJ IDEA, Navicat Premium, Visual
Studio Code, HBuilder X, RedisDesktopManager

PROJECT EXPERIENCE

Healthcare Knowledge Graph & Graph RAG System

02/2026-05/2026

- Built an end-to-end healthcare Graph RAG application using Python, LangChain, Neo4j, Cypher, and the OpenAI API, translating natural-language questions into graph queries and grounded, evidence-based responses.
- Designed a compound-query decomposition and subgraph-merging pipeline to support multi-step queries across patient admissions, diagnoses, medications, and laboratory results.
- Developed an interactive Streamlit application that presents structured results, generated Cypher queries, and graph-based retrieval paths, improving the transparency and interpretability of generated answers.

Large Language Model Alignment System

02/2025-04/2025

- Built an end-to-end LLM alignment system using LLaMA 3.2, PairRM, LLM-as-a-Judge, DPO, and LoRA, automating preference-data generation, ranking, training, and evaluation.
- Generated hundreds of ranked response pairs from 100+ LIMA instructions and implemented quality-control prompts to improve evaluation consistency across multiple models.
- Designed a parameter-efficient fine-tuning pipeline with DPO and LoRA, reducing training complexity while preserving scalable experimentation and model iteration.
- Implemented a closed-loop alignment workflow that continuously generated new training examples and refined model behavior based on preference signals.

Image Management Tool

10/2024-12/2024

- Built a JavaFX-based image management application supporting image upload, thumbnail preview, metadata extraction, and multi-format conversion using Java and ImageMagick/JMagick.
- Implemented image downloading and configurable processing features, including grayscale and color-tint filters, with user-selected output formats.
- Applied MVC and object-oriented design principles to improve code maintainability, and optimized image loading and memory usage for large files.

Supermarket Management System

09/2022-11/2022

Project Objective: Design a supermarket management system that can be applied in practice

- Designed user interface and wrote front-end code using HTML5, CSS, and JavaScript languages and technologies.
- Used SQL and related technologies and implemented database design, refinement and management by drawing database ER diagrams.
- Developed the Service layer and Controller layer of the project, realized interaction with the Web page, and debugged the interaction mode.
